Description

Connection Technology Systems (CTS) FOS-3128 is a layer2+ gigabit access switch equipped with 24 dual-speed SFP slots and 4 combo uplink ports (10/100/1000Mbps RJ-45 + 100/1000Mbps SFP slots). All SFP slots can accommodate wide range of SFP transceivers including single-mode, WDM or CWDM transceivers. FOS-3128 is perfect for service providers and enterprises who plan to implement FTTX or Metro Ethernet networks, with further spanning into triple-play service.

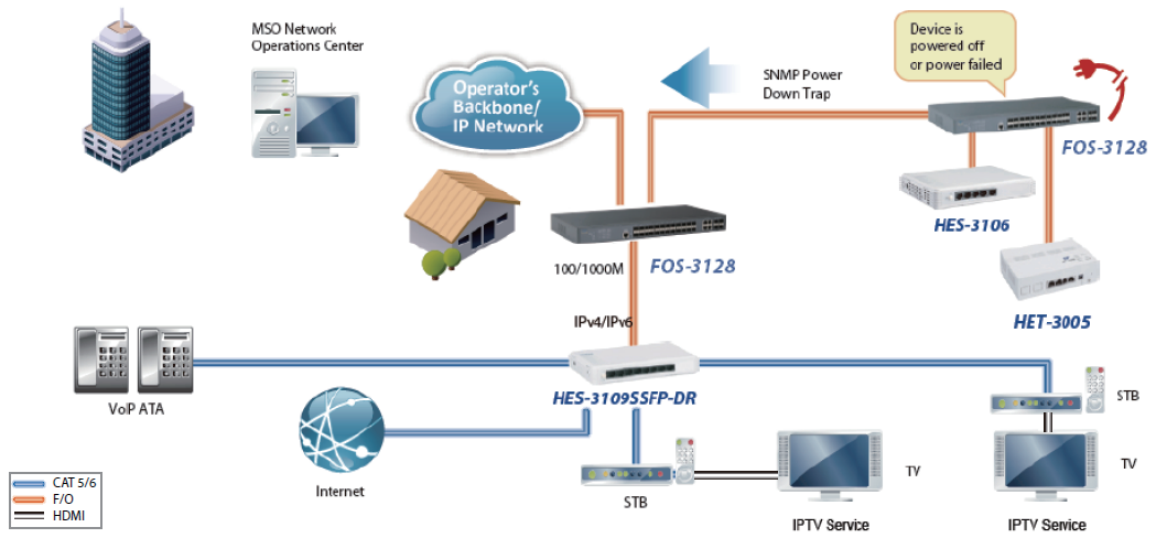

FOS-3128 delivers wire-speed throughput for data, voice and IPTV services, using non-blocking 56Gbps switching fabric. 1+1 power supply design can provide seamless power changeover to reach sustainability of power if one of power supply has failure. AC and DC powers can be mixed in the same unit for deployment flexibility.

Many service providers are extending their existing data service with triple-play service because it can generate higher revenue return by combining data, voice and IPTV in one box. Advanced features including MVR**, IGMP snooping, IGMP fast leave, IGMP filtering, various QoS classifications and rate limit control facilitate service providers to deploy a manageable network environment and deliver a successful triple-play service.

In order to provide customers extra security and separation, FOS-3128 has come with QinQ feature. This feature enables service providers to separate different customers at layer2 level no matter what VLAN setting the end customer has.

With carrier-grade in mind while keeping user-friendly for administrators, FOS-3128 can be easily managed by web interface, console, telnet CLI, SNMP and DHCP auto-provision.
