Security & Communication

With its head office in Salzgitter, funktel GmbH is a leading manufacturer of professional security and communication solutions based on DECT, GSM and TETRA for industry, public utilities and authorities.

We are specialists in personal emergency signal systems with mature know-how in developing and producing intrinsically safe devices that also satisfy the directives of the Employer's Liability Insurance Association (of Germany).

As one of the largest manufacturers of handsets for professional and industrial applications, our facility in Salzgitter develops and produces mobile terminals and certified personal emergency signal systems based on DECT and TETRA.

■ The new DECT terminal units of the funktel FC4 range are the result of decades of experience and the technical expertise of funktel, as well as the latest developments in the fields of ergonomics, energy management and user prompting.

The funktel FC4 series comprises compact and highly robust mobile units for wireless telephony, messaging, as well as offering the possibility of integration into a personal emergency signalling system.

The FC4 handset range includes explosion-proof versions approved to ATEX directives for use in potentially explosive industrial environments.

A further benefit can be found in the short return of investment period due to savings made in both time and costs thanks to the reduction in reaction times and decision processes.

During the development of these units attention was focused on the requirements of users who work alone and requiring a high level of personal security (in accordance with the BGR 139 regulations of the German Employers' Liability Insurance Association) – for example, workers in the oil and petrochemical industry, in prisons and psychiatric facilities.

The durability of the products and the range of useful accessories available ensure a high degree of investment security.

funktel FC4: The universal handset range

GAP / CAP Standard

The DECT handsets in the funktel FC3/ FC4 series use the tried-and-tested GAP and CAP DECT radio standards to ensure the highest connection and voice quality. This means that the handsets can be operated in any GAP-compatible DECT infrastructure. → Page 6-7

Explosion protection

The models in the funktel FC4 Ex range offer specially designed and encapsulated housings and electronic protective measures to allow use in industrial environments with explosive dusts and gases—certified to strict regulations. → Page 8-9

Explosion protection with headset

Where high noise levels and explosive gases call for headphones and/or headsets, we recommend the explosion-proof HS models in the FC4 range. → Page 9, 11, 13

Personal emergency signal functions

As high-quality personal emergency signalling devices the FC4 S (Secury) models are fitted with sensors for automatic alarms, special keys for manual alarms as well as functions for both area-specific and room-specific localisation. → Page 10-11

Accessories

Meet the demands of your specific application by rounding off your FC4 handsets with high-quality OEM accessories—whether chargers or replacement batteries, headsets or installation software. → Page 12-13

Performance features

A detailed overview of all model variants available in the funktel FC4 handset range can be found at the end of this brochure. → Page 14-15

■ The funktel FC4 range introduces a new generation of terminal units where particular emphasis is placed on the meaningful display of telephone activities and on making rapid response possible. Incoming calls and entries in the dial, redial and call lists are automatically linked to name entries and displayed accordingly. Indicators signal missed calls and messages. Important functions such as call-back, phone book access or redial list can be called up by pressing a single button (shortcut).

The high-resolution, illuminated colour display, the newly designed symbol-based user interface and the similarly illuminated keypad with coloured menu keys make the FC4 extremely simple and a pleasure to operate. Modern battery technology with state-of-the-art power management and the wide range of configuration possibilities for operation and signalling make the FC4 handset series extremely ergonomic—meaning improved security of operation and information.

funktel DSS user report: clinic for psychiatry and psychotherapy in Kaiserslautern

■ In the Clinic for Psychiatry and Psychotherapy in Kaiserslautern a funktel DSS radio-based personal emergency signal system with telephone functions has been in operation since September 2005.

Customer portrait

The Clinic for Psychiatry and Psychotherapy in Kaiserslautern was established in September 2005 and is a part of the Pfalz Klinikum-Verbund, a regional group of clinics in the Palatinate with a total of 10 facilities. The in-patient section comprises 70 beds spread over four separate wards; the day-care section has a capacity for 20 patients. The patients are cared for by around 100 staff, including many on part-time contracts.

Choosing the system

As this was a new building the modern clinic was aiming for a state-of-the-art personal emergency signal system to be used at all of the clinic's hospital locations. The system had to provide a precise localisation function. The mobile handsets were to be designed not only as emergency alarms, but also function as internal telephones. The whole clinic organisation places great emphasis on involving the employees in personnel management decisions.

At an internal presentation four manufacturers were invited to present their systems to allow the employees to experience the equipment first hand, particularly the mobile handsets.

The decisive factors were the impressions of the staff, the price and the regulations specified in the German Employers' Liability Insurance Association's BGR 139 code. The clinic decided in favour of the system presented by funktel. Management and employees were equally convinced by the solution offered and so a DECT Secury system with 54 handsets, 38 location transmitters and 28 radio base stations was ordered.

The emergency signalling system in operation

Day-to-day life in the clinic is typified by the completely different daily routines of the individual patients. Generally the patients can move freely within the wards. Depending on the requirements, treatment services include one-on-one meetings, group discussions, ergotherapy and therapeutic exercising, everyday training, various indoor and outdoor activities, to name but a few. Relatives and friends are also free to visit at all times.

All employees on the premises carry a DECT handset with alarm function and can immediately trigger an alarm in an emergency. As the clinic employees are constantly on the move within the premises, the localisation function of the personal emergency signal-

ling system plays a central role. Localisation sensors are installed at numerous locations throughout the building and permit precise localisation both indoors and in the clinic's grounds. Automatic alarms are triggered when staff find themselves in a threatening situation.

The clinic management is highly satisfied with the support provided by the manufacturer. Helmut Leim, Head of Technical Facility Management, commented: "The excellent support provided by the manufacturer during the installation phase, but especially in the follow-up period is an important factor that is decisive for using the emergency signalling system at other clinic locations."

In the end it was the turn of the clinic staff to give their opinion by completing a questionnaire on the use of the system and submitting points of criticism and suggestions for improvement. The feedback was so positive that the introduction of the personal emergency signalling system is already at the planning stage for a further clinic location.

funktel FC4: DECT industrial handset

■ The funktel FC3/FC4 range offers GAP-compatible, high-quality DECT handsets for professional applications. All funktel FC4 models are also fully compatible with the I1, I3, I5 and I55 cellular integral DECT systems.

Thanks to the colour display, illuminated keypad, lithium-ion battery, incoming and outgoing call logs as well as messaging lists and a sturdy design these handsets are certainly a welcome addition to your communication system.

Comfortable features, e.g. hands-free operation, MIDI ringtones, vibration alarm signalling, easy operation using symbol-based user interface and memory-storage of the settings on a replaceable memory card (SIM card) are obligatory with the funktel FC3/FC4.

funktel FC4 set 5.010.800.100

Highlights of the funktel FC3/FC4 series:

- TFT colour display: 16 bit / 65,536 colours, with shockproof, scratch-resistant screen
- Illuminated keys, abrasion-resistant, with colour hotkeys for direct access to the icon-based menu control
- 20 MIDI ringtones, melody and volume can be set separately for internal and external calls, suitable for loud environments
- Loudspeaker for intelligible hands-free operation
- Diversity DECT antenna with improved reception quality
- Replaceable lithium-ion battery, 650 mAh, modern battery management with exact charge level indicator
- Local phone-book: 500 entries with name, two phone numbers and three lines for information details
- Real-time clock and calendar with alarm function
- All user entries are stored on an easily replaceable memory card (SIM card)

Specifications of funktel FC4:

Dimensions

Dimensions (L x W x H)	approx. 141 x 47 x 20 mm (with clip* approx. 141 x 47 x 30 mm)
Weight (incl. battery)	approx. 106 g (with clip* 113 g)

Degree of protection and temperature ranges

Degree of protection:	IP 65 (jet-proof and dust-tight)
Temperature range:	Operation: -10 ... +55 °C Battery charging: +5 ... +40 °C Storage (short-term): -25 ... +55 °C

Power supply

Replaceable lithium-ion battery:	650 mAh
Battery stand-by time:	up to 150 hours**
Battery talk time:	up to 17 hours**

DECT-HF

Frequency range:	1.88 ... 1.9 GHz
Transmission power:	Mean value 10 mW, peak value 250 mW

Acoustic features:

Acoustic alarm:	up to 100 dB(A)*** at a distance of 30 cm
Loudspeaker:	rear-mounted
Hands-free operation:	very good voice intelligibility
Vibration alarm:	additional or silent alarm

Memory

Memory Card (SIM card)	128 KB for telephone book, incoming and outgoing call logs, and all user data
------------------------	---

*) With clip

**) Without standby display illumination

***) Depending on the ringtone selected, therefore also suitable for loud environments

Ergonomic operation

The symbol-based and colour-coded user operation concept of the FC4 range allows optimum operation at all times and fast detection of the unit and messaging status.

MemCard (SIM card)

All user settings, all call logs and all stored messages, received and sent, are stored on a separate memory card and can therefore be comfortably transferred to a different handset.

Quick-replacement slot-in battery

The lithium-ion battery in the FC4 can be easily replaced by the user. A special charger (optional extra) allows simultaneous charging of the unit's battery and a spare battery.

funktel FC4 L

The range of functions is identical to the FC4, but the funktel FC4 L also includes an integrated position sensor that automatically triggers an alarm as soon as the device is moved more than 55° from the vertical position. A programmable pre-alarm (tone/vibration) prevents premature alarm signals, but if not reset a call is automatically made to a freely programmable telephone number with hands-free operation—a useful aid in an emergency.

funktel FC4 L Set (with clip) 5.010.830.100

funktel FC3

The all-round handset for all GAP-compatible telecommunication systems. The FC3 has all of the convenience features of the FC4, such as incoming and outgoing call logs, high degree of protection when dropped and is also dust-tight and jet-proof to IP 65. The telephone features depend on the GAP telecommunication system used.

funktel FC3 set 5.010.800.000

funktel FC3 L

The funktel FC3 L DECT telephone for GAP-compatible telecommunication systems and increased security is fitted with a position sensor that, when triggered in an emergency, automatically initiates a distress call.

funktel FC3 L set (with clip) 5.010.830.000

funktel FC4 Ex:

The handset with explosion protection

Highlights:

- Explosion protection: Gas zone 1, dust zone 21
- Degree of protection IP 65 (jet-proof and dust-tight)
- Robust design with screw-fastened battery
- Newly designed graphic user interface
- Keys and display illuminated for use in poor lighting conditions
- 20 MIDI ringtones, high volume up to 93 dB(A)
- Individual signalling for internal, external and messaging (ringtones, volume, duration, vibration with temporary muting)
- Hotkey for local telephone directory with 500 entries
- User-replaceable, screw-fastened lithium-ion battery with explosion protection
- Diversity DECT antenna for better connection quality
- Loudspeaker for hands-free operation

■ Industrial environments in chemical and power supply companies, refineries, etc., call for special equipment to be used in potentially explosive areas. The funktel FC4 Ex is an ATEX-certified DECT industrial handset designed for use both in explosive environments classified as Zone 1 (potentially explosive gases) and Zone 21 (potentially explosive dusts).

The features and facilities carried over from the FC4 make the funktel FC4 Ex a robust system telephone.

funktel FC4 Ex set 5.010.820.100

Specifications funktel FC4 Ex:

Dimensions

Dimensions (L x W x H);	approx. 141 x 47 x 35 mm*
Weight (incl. battery):	approx. 133 g

Degrees of protection

Explosion protection zones 1/21: Gas approved to ATEX 94/9/EG:	II 2 G Ex ib IIC T4
Dust approved to ATEX 94/9/EG:	II 2 D EX ibD 21 T125°C IP6X
Degree of protection:	IP 65 (jet-proof and dust-tight)

Power supply

Replaceable lithium-ion battery:	650 mAh (screw fastenings)
Charge time:	approx. 5 hours

Battery life

Stand-by:	32 – 150 hours**
Talk time:	12 – 17 hours**

DECT-HF

Frequency range:	1.88 ... 1.9 GHz
Transmission power:	Mean value 10 mW, peak value 250 mW

Acoustic features

Acoustic alarm:	up to 93 dB(A)*** at a distance of 30 cm
Loudspeaker:	rear-mounted
Hands-free operation:	very good voice intelligibility
Vibration alarm:	additional or silent alarm

*) With clip

**) Without standby display illumination

***) Depending on the ringtone selected, therefore also suitable for loud environments

funktel FC4 Ex HS

Specially for use in combination with a headset in ex-proof areas, the ATEX-certified DECT handset FC4 Ex HS is approved for operation with a headset in gas zone 1.

funktel FC4 Ex HS set 5.010.820.600

funktel FC4 L Ex

In addition to the integrated position sensor which is triggered when a 55° inclination is exceeded, the funktel FC4 L Ex model offers certified explosion protection.

funktel FC4 L F

In addition to the integrated position sensor which is triggered when a 55° inclination is exceeded, the screw-fastened battery in the FC4 L F is offering enhanced reliability in rugged environments.

funktel FC4 L F set 5.010.840.100

funktel FC4 S: The Secury handset for optimum personal security.

■ The latest generation funktel FC4 S personal emergency signal unit is designed to protect persons working solo or in potentially hazardous areas or situations. Programmable sensors for both manual and automatic alarms and functions enabling localisation with area and room accuracy are combined with the user-friendly telephone functions of the FC4.

The sturdy, dust-tight and jet-proof housing makes the FC4 S a personal emergency signal system device for the highest security demands. The Secury handsets comply completely with the provisions of BGR 139 and are certified to DIN V VDE V 0825-1.

funktel FC4 S set 5.010.860.100

Highlights:

- 4 manual alarm types: big red emergency call button for emergency call alarm 1+2, separate button for warning alarm 1+2
- Automatic alarm types: position alarm, no-motion alarm, time alarm and loss alarm to identify attack situations
- Localisation with inductive localisation transmitters (fine) and DECT base stations (rough)
- Watchman control functionality with localisation display
- Automatic safeguarding of device functions using sensor and localisation tests prior to use, 24-hour test
- Individual programming of the alarm types, times for pre-alarm/ alarm and for the corresponding signals
- Complete integration of emergency call functions into the unit's operating concept
- High signal volume for noisy environments with additional vibration alarm
- Explosion-proof models for explosive gas and dust-loaded atmospheres
- Colour display, illuminated keys, symbol-based and colour-coded user guidance
- Lithium-ion technology for long battery life

Specifications funktel FC4 S:
